

Report from seminar 29 – 30th November, Herning, Denmark

NJF, EurAgEng, Agromek joint seminar. 29th to 30th of November 2022

Advances and Innovations in Agricultural Engineering
The 4th NJF - EurAgEng - Agromek Joint Seminar
November 29th - 30th, 2022, Herning, Denmark

Please visit www.nmbu.no/go/agromek for more information

The webpage was made in cooperation with NMBU www.nmbu.no/go/agromek and OrgaNicer at Agromek. There you may find program and overview over keynote speakers among others. Totally we were around 30 participants. The venue was close to the agricultural exhibition area, which made it possible for the participants also to follow topics of interest at the fair. There were totally 19 presentations. In addition, we had a walkaround with presentations of selected smart farming equipment at the Days of Future (of agriculture) at the fair and especially the *Square meter farming* with several solutions and innovations.

We had an evaluation in the NJF section of technology and innovation the following day, and a common opinion was that the quality of presentations, program, size of meeting room and facilities as well as networking and interaction were very good. An adapted room and not too many participants stimulated to more discussion and common ship than often for larger events. We were also invited to the Agromek dinner Tuesday evening together with several hundreds other people mainly from companies. A seminar linked to such an exhibition stimulates to improved interdisciplinary communication, co-operation and more innovation. Thus, the main opinion was to follow up a similar seminar or conference together with the next Agromek fair in late autumn 2024. Due to the costs and transport distances, a hybrid solution will be evaluated.

2022.12.01 Nils Bjugstad, REALTEK, NMBU

Happy to meet face to face again!!
